

Menopause got you sweating?

You are not alone.

Did you know that excessive sweating (hyperhidrosis) is a common yet under-discussed symptom of menopause?

75%

of all women have sudden brief increases of body temperature also known as hot flashes.¹

Hot flashes hit 20-30 times per day.²

Hot flashes increase sweat that can nourish underarm bacteria which could increase odor.³

//

...but when a bad hot flash hits, my armpits go full blast.

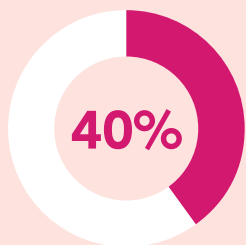

- Reddit User

Menopause is a natural phase of life, but it can bring frustrating symptoms like hot flashes and excessive underarm sweating.

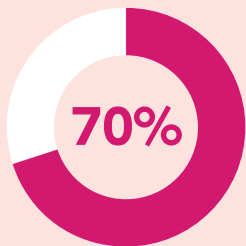

75 million women in the U.S. are currently in perimenopause, menopause, or post-menopause^{4,5}
