

# SWEAT AND ODOR STOPS HERE

PERMANENTLY REDUCE UNDERARM  
SWEAT, ODOR AND HAIR.

## SIGNS YOU COULD BE A CANDIDATE

Reapply deodorant or antiperspirant more than once per day

Changing clothes multiple times per day

Use sweat shields or patches to protect your clothes

Showering more than one time per day

## WHAT IS MIRADRY?

The miraDry treatment is a procedure performed by a trained medical professional, in as little as one hour.\*\*

### 3 STEPS TO TREATING SWEAT AND ODOR

Local anesthesia is administered to assure maximum comfort during the treatment.

A temporary tattoo is used to mark skin in preparation for treatment.

The area is treated with miraDry, eliminating sweat and odor glands while reducing hair in the underarm.

Permanent

Immediate

Non-surgical

The miraDry system is FDA-cleared for the treatment of primary axillary hyperhidrosis (excessive underarm sweat) and the permanent removal of underarm hair. It also may reduce underarm odor.

You should not have the miraDry treatment if you have a heart pacemaker or other electronic device implant, need supplemental oxygen or have known resistance to or history of intolerance to local anesthesia including lidocaine and epinephrine. The most common side effects include swelling, discomfort or pain, redness, bruising, bumps and altered sensation in the treated area. Some side effects may last a few days to a few weeks. Others can last from one to several months following treatment. Patient results and experience may vary.
