

YOU ARE NOT ALONE

Half the world - all women - will experience menopause. Of those, we believe nearly 70% will experience an increase in underarm sweat and odor.

DON'T WAIT TO SEEK RELIEF

Perimenopause, the transitional phase before menopause, can last for years, triggered by dropping estrogen levels that fluctuate leading up to your last period. These hormonal changes can cause dozens of symptoms, many of which persist long-term, and can be managed with your healthcare provider.

DISCOVER PERMANENT UNDERARM SWEAT AND ODOR REDUCTION
