

SWEAT & ODOR HAPPENS.

And It's More Common Than You Think.

Sweat is normal. Excessive underarm sweat isn't. If it's something you think about often, it may be **hyperhidrosis** — a condition where overactive sweat glands most commonly affect the underarms, hands, or feet.

Sweat isn't a choice,
but your **treatment** is.

Daily Solutions

Oral Medication
Prescription Antiperspirant
Wipes

Weekly Solutions

Iontophoresis

Quarterly Solutions

Botulinum Toxin Injection

Permanent Solutions

Microwave Thermolysis

Don't manage excessive sweat alone.

Talk to your doctor and scan the QR code to learn more about a **permanent treatment** option.

The miraDry system is FDA-cleared for the treatment of primary axillary hyperhidrosis (excessive underarm sweat) and the permanent removal of underarm hair. It also may reduce underarm odor. You should not have the miraDry treatment if you have a heart pacemaker or other electronic device implant, need supplemental oxygen or have known resistance to or history of intolerance to local anesthesia including lidocaine and epinephrine. The most common side effects include swelling, discomfort or pain, redness, bruising, bumps and altered sensation in the treated area. Some side effects may last a few days to a few weeks. Others can last from one to several months following treatment. Patient results and experience may vary.
